Special Notices and Terms of Business.

- Carriage and Discount Terms .- We do not pay carriage on Plant Orders, but on all prepaid orders amounting to 20s. or over we allow discount of 1s. in the £, which may either be deducted when remitting or will be credited against the cost of carriage. Orders for credit account if over 40s. in value are subject to a discount of 1s. in the £, if paid within 14 days of date of invoice. In order to avoid delay new customers are requested to send cash with order-The Railway Companies still require that the carriage on all passenger train traffic be prepaid; we shall in such cases pay carriage and add the Railway charge to our invoice unless covered by the Discount as mentioned
- Terms of Credit.—Our books are made up half-yearly, when all accounts are due net. Interest at the rate of 5 % per annum will be charged on overdue accounts.
- Remittances.—Money Orders and Postal Orders to be made payable at Bedford Street Post Office; these and all Cheques should be crossed "Westminster Bank, Ltd."
- Packing .- Boxes and packing are charged at cost price except in the case of prepaid orders amounting to 40s. and over when no charge will be made. When charged for, the amount will be credited on safe receipt if they are returned to us carriage paid within a fortnight, provided they have the sender's name on the address label for identification and that an advice is sent us by post stating date of dispatch and name of Railway.
- Catalogues.—Our Catalogue of Flower and Vegetable Seeds, also Bulbs for Spring Planting is published 1st of January, Hardy Plant Catalogue in February, List of Autumn-flowering Bulbs (Crocus species, Colchicums, etc.) in July, Daffodil and General Bulb Catalogues in We are always pleased to forward any of these Catalogues, free of charge, to friends of our Customers on receipt of a line requesting us to do so.
- Gardeners.—We keep a special Register of Gardeners in want of situations, and shall be pleased to put such in communication with any of our Customers requiring Head Gardeners.

Notices to our Overseas Correspondents.

- Prepayment necessary.—Owing to the expense incurred in collecting accounts abroad we beg that Customers will kindly enclose with their Orders a remittance, a draft, or an "order to pay" on a London Bank or Agent; the remittance should be sufficient to cover cost of postage or carriage when the freight is required to be paid in advance.
- Carriage. No allowance for Carriage can be made in the case of Overseas Orders; the extra attention necessary precludes any kind of allowance in this respect.
- Packing.—A moderate charge will be made where special materials have to be used, such as Sphagnum Moss, Oil-Silk, etc., and where any special packing necessitates a great deal of labour (as in the case of some Plant Orders), when out-of-pocket expenses only will be charged.
- Shipping, etc .- In Shipping Bulbs and Plants to Australia, New Zealand, America, India, and the Cape, we exercise great care in selecting, preparing, and properly packing the same. Still there are so many contingencies that we cannot, in any way, hold ourselves responsible for the condition in which Plants or Bulbs reach their destination. Our Customers will confer a favour if they report, on arrival, the condition of the goods. Our experience in successfully preparing and shipping Seeds, Bulbs and Plants to all parts of the world extends over a very long period.

Aster, New Dwarf Hybrids.	
It is our pleasure to introduce a race of New Dwarf Hybrid Asters raised Mr. H. V. Vokes of Southampton. We feel that these will fill a long-felt want in providing a race of dwarf compact very free-flowering plants, blooming at a season when such are scard. They are similar in habit to the Novi-Belgii Section except for their height, and product innumerable flowering shoots covering the plant in blossom for a considerable time. They are especially valuable for edging or for grouping in the front of Borders, and are also charming in the Rock Garden, where they will provide a display of bloom in September and October equal to that given by the Aubrietia in Spring. The plants are of strong and vigorous grown and of the easiest cultivation. We hope in the future to add to the following preliminary list.	ng ce. ce are ng eer th
Countess of Dudley, charming clear pink flowers with yellow eye, of bushy habit an free-flowering, October, 9 in	6 2/6
Lady Henry Maddox, clear pale pink flowers, very free-flowering and of dwarf compact habit, SeptOct., 9 inper doz. 27	6 2/6
Marjorie, of compact habit, bearing large flowers of a bright rose-pink, the latest to bloom October, 9 in	n, - 2/-
Nancy, of dwarf very bushy habit and very free-flowering, the plants being covered with pal flesh-pink flowers towards the end of September and early October, 9 inper doz. 21/	A
Ronald, a dwarf bush covered with flowers of a pleasing bright shade of lilac-pink with rose-pink buds, very showy, early October, 12 in	h
Victor, the dwarfest of all and very pretty. The flowers are of good size and of a beautifuclear pale lavender-blue, a charming rock-plant, flowering mid-Sept., 6 inper doz. 21/	1
BLETIA hyacinthina, a charming Chinese Orchid, with pretty ribbed foliage and gracefur racemes of deep rose-pink flowers; it thrives in the bog garden and sheltered shad situations, plant in a peaty compostper doz. 18/	ıl
CAMPANULA persicifolia, Snow King, a white form of Telham Beauty, producing very larg cup-shaped flowers, 2½ in. across, of great substance and of the purest white, borne on stou stems, June, 3 ft	e
DELPHINIUM—Beautiful New Varieties of Recent Introduction.	. 5/-
Lord Derby, producing very large semi-double flowers, gentian-blue overlaid rich rosy mauvwith small white eye; an improvement on The Alake, 4 ft., A.M. R.H.Sper doz. 36/	- 3/6

flowering rock-plants, 6 in	10/6	1/-
AGAPANTHUS (African Lily). Valuable for growing in tubs, either for greenhouse or summer decoration in porches, on verandahs, terrace walks, lawns, etc.; also very		
effective planted out by the waterside. In winter the plants should either be covered		
with light litter or long manure, or lifted in October and stored in dry soil, replanting		
them in March. The Agapanthus is a gross feeder, and likes a richly manured soil		
and plenty of moisture while in growth. Established plants produce stout stems, each		
bearing a very large number of flowers from July to September.	1010

star-shaped flowers, June-July, 3 ft	10/0	1/-

BARR'S PERENNIAL ASTERS.

Michaelmas Daisies or Starworts.

ASTER NOVI-BELGII GLORY OF COLWALL.

Gold Medal awarded to us by the Royal Botanic Society.

Michaelmas Daisies fill a most important place in all hardy flower gardens, lighting up the borders and shrubberies with masses of brightly coloured blossoms throughout the autumn months up to November, when other flowers are scarce. To cut for vases and church decoration, etc., they are invaluable, providing an inexhaustible supply of bloom. They are also excellent for naturalising in meadows, shrubberies, hedgerows, etc., where the most beautiful effects are easily obtainable by their use; they thrive equally well in partial shade or in full sun. Long borders, drives, shrubbery walks, etc., should be planted liberally with breadths of Michaelmas Daisies to obtain fine colour effects during autumn. The graceful small-foliaged varieties of cordifolius, ericoides, etc., are of great value where light, cloudy effects are required in the border. The New Dwarf Hybrids offered on page 1 are the most decorative of Autumn flowering rock garden plants in existence.

As a pot-plant the Michaelmas Daisy rivals the Chrysanthemum for autumn decoration. Strong single crowns should be potted up in March or April, and grown on in the same manner as Chrysanthemums.

Michaelmas Daisies are of easiest culture, thriving in all soils and situations, and are uninjured by the most severe weather. Plant in spring or autumn.

AMELLUS SECTION	colleges of the everture.

These are amongst the largest flowered of Michaelmas Daisies, the individual blooms measuring from 2 to 3 inches across. They are of erect bushy habit, seldom exceeding 2 ft. in height, and rank amongst our most handsome and decorative border plants: they are invaluable for massing for early autumn colour effects, and are valuable as cut flowers.

FIG

CHRYSANTHEMUM—continued. per doz. each. uliginosum (Moon Daisy), large single snowy white flowers, with fresh green foliage;

CHRYSANTHEMUM DOUBLE, HARDY BORDER VARIETIES. For late summer and autumn flowering outdoors.

These Hardy Double Chrysanthemums are indispensable for providing decoration in the garden during late summer and autumn and to cut for vases. Plant from mid-April to mid-May, the ground having been prepared by deep digging and a liberal addition of rotten manure. If the summer is dry they should be kept well supplied with water. To induce a bushy growth, the head of the plant should be pinched out about the middle of May and again about the middle of June.

HARDY CYCLAMEN, Autumn and Spring-flowering.

These Hardy Cyclamen require perfect drainage and shelter from ground winds and the early morning sun; at the bottom of old walls facing north, in the rock-garden or nestling in the grass near the roots and under the shelter of old trees, they produce a very charming effect; they are also good subjects for fern plantations, where they obtain the shade they like. In making up a suitable soil let there be a liberal proportion of old mortar rubble with the addition of some well-decayed leaf soil and good fibrous loam. Hardy Cyclamen prefer shallow planting, 1 to 1½ inches deep, measuring from top of corm; they should all be given a mulching of well-decayed leaf soil after planting, and if the situation is exposed, a light covering of dry leaves or litter in winter is beneficial.

Autumn-flowering Hardy Cyclamen.	A STATE OF THE PARTY OF THE PAR	oz. each.

DELPHINIUMS.

Perennial Larkspurs.

These handsome stately border plants produce during June and July, long bold flower spikes ranging in colour from the palest sky-blue to the darkest shades of indigo and violet, and are univalled for producing blue effects in the summer border. They should be planted in a rich wellmanured soil, and during growth should not be allowed to become dry; a mulching with well-decayed manure is very beneficial. If the situation is exposed it may be advisable to stake the spikes.

Terrestrial Orchid for light sandy soil and partial shade, June-July, 1 ft	21/-	2/-
EREMURUS; should be planted in Autumn, see our Autumn Bulb Catalogue.		
ERICA (Hardy Heaths). An invaluable family of dwarf Evergreen shrubs equally suitable		
for the rock-garden, border or shrubbery. They are not particular as to soil provided it is well drained and does not contain lime, excepting MEDITERRANEA		
HYBRIDA and CARNEA which will grow in a calcareous soil. The ideal soil should		
contain a proportion of peat or leaf mould. Few families provide such a wide		
range of flowering, and from one species or another flowers may be had all the year		
round. 12 in 6 beautiful named varieties

TALL BEARDED FLAG IRISES. POGONIRIS, OR IRIS BARBATA (FLEUR DE LYS). For Flower Borders, Shrubberies, and for Naturalising.

Irises in Flower at our Taplow Nurseries.

Flag Irises have always formed an important part of our cultures since as far back as 1870, when our collection was acknowledged to be the most complete in England. Our annual exhibits of these beautiful flowers are always greatly admired.

Within recent years many new seedling varieties have been raised, some of them improvements, others either lacking form or of poor constitution. In the following pages and in our List of New Irises on page 2 we have included only those which after trial at our Nurseries have proved to be of good constitution and in our opinion surpass the older varieties.

No garden is complete without Flag Irises, not only on account of their beautiful flowers, but also for the charm of their soft glaucous foliage, which brings into relief the colours of other flowers. The **Dwarf Bearded Hybrids** offered on page 36 should also be included as being specially valuable in the rock garden and for the front of borders.

IRIS, TALL BEARDED FLAG-continued.

An Iris garden will give bloom practically the whole year round by a judicious selection of Tall and Dwarf Hybrid Flag and Beardless Irises together with various bulbous Irises, a full collection of which will be found in our Bulb Catalogue; where such a garden is contemplated we shall be pleased to give further advice. Iris Kæmpferi and many of the Beardless Species offered on pages 37 to 39 are specially suitable for damp situations, and some may even be treated as semi-aquatics.

CLASSIFICATION.

We have arranged these Tall Bearded Irises in natural groups which we hope will be helpful to amateurs in making selections. Each group has a distinctive character. Group I. comprises those varieties flowering in May, and includes the well-known blue, purple, and white Flag Irises, besides a number of handsome May-flowering hybrids of recent introduction; following in June come the Irises of Group II., which we have broadly divided into Colour Sections, which we hope will be of assistance to our customers in making suitable selections for colour groups or borders. Group III. comprises the Dwarf Bearded Hybrids, flowering from March to May, suitable for the rock garden, etc.; Group IV. represents the Beardless Species for borders and water-side; Group V., Iris Kæmpferi, the Clematis-like Japanese Iris.

CULTURE OF FLAG IRISES.

Tall and Dwarf Flag Irises, Groups I., II. and III.—These Irises like a well-drained soil and by preference a sunny situation. It is most important that the soil should not be deficient in lime, and when preparing the ground a good dressing of lime is recommended. They object to fresh stable manure, which must be avoided when planting. An occasional application in early spring of superphosphate of lime, using about 2 ounces to the square yard, will add vigour to the plants and correct any acidity in the soil. Plant shallow, barely covering the rhizomes or root stocks with soil.

Flag Irises may be planted any time from late July to end of March, whenever the ground may be in the most suitable condition, but we recommend from the end of August to the end of October as the best time. Late summer and early autumn planting will ensure better bloom the first season.

Beardless Irises, Groups IV. and V. object to lime, which should be avoided in planting; they mostly thrive best in a rich and moderately heavy soil, and should be planted in autumn or early spring. See special cultural notes on page 37.

The plants we supply are such as will give bloom the first year of planting, and are of better value, therefore, than the small plants frequently offered at lower prices.

GROUP III. Dwarf Bearded Hybrid Flag Irises.

Flowering during March, April, and May.

These beautiful Irises flower from March to May (before the Tall Flag Irises) and are therefore specially valuable in maintaining a succession of bloom from early spring. Being of dwarf growth they are suitable for planting in front of the taller growing Flag Irises. They are also valuable as permanent edgings to Flower Borders and are charming subjects in the Rock-Garden and for old walls. The time of flowering is indicated by numbers after the name, thus (1) is the earliest and (6) the latest to bloom.

IRIS-continued.

GROUP IV. Irises—Beautiful Beardless Species.

Varieties suitable for Borders, Ponds, Damp Places and Rockwork, but all Sun-lovers.

The Irises offered in this Section are all perfectly hardy (excepting I. japonica), and quite distinct from the Bearded Irises. Those marked thus §, while being beautiful border plants, may also be treated as semi-aquatics. None of the Irises in this section require lime, they thrive best in a rich and moderately heavy soil. I. cristata has lovely amethyst-blue flowers, and is charming in the rock garden in sunny but damp situations.

I. unguicularis (stylosa) and its varieties, if grown in a sunny and well-drained position, will

yield abundance of charming flowers throughout winter.

Plant the Irises in this section, if possible, in early autumn or spring; if in spring, plant firmly and attend to with water until established. When planting in damp marshy ground, or at water's edge, spring planting is recommended after the winter floods have subsided.

IRIS KÆMPFERI (JAPANESE FLAG IRIS).

GROUP V. Iris Kæmpferi. The Clematis-like Iris of Japan.

This Section contains the most beautiful of the moisture loving Irises, their immense Clematis-like flowers are exceptionally showy, the prevailing colours being combinations of white, purple, crimson-purple, violet and blue, flowering from late in June to early August, ht. 2½ ft.

Culture.—Plant in full sun, if possible at the water's edge where the fibrous roots can reach the water but the crowns are above water level, during summer they will not resent being slightly flooded, but must be kept reasonably dry in winter. The soil should be rich and heavy rather than sandy, and should not contain lime. They may also be successfully grown in the border if the soil is naturally of a cool nature and is kept well hoed in summer.

Barr's Selections of Japanese Flag Irises.

Our collection consists of the choicest varieties both as regards size of flower and diversity of colour and cannot fail to please purchasers.

KNIPHOFIA-Red-hot Poker.

KNIPHOFIA (syn. Tritoma), popularly known as the "Torch-Lily," "African Flame-Flower," or "Red-hot Poker." From a dense root-foliage rise stout stems, surmounted by brilliantly coloured tubular flowers. Its noble appearance and showy flower spikes render the Kniphofia a valuable plant for shrubberies, flower borders, beds on lawns, and wild gardens. The flowering season extends from June to October, the early flowering varieties often producing a second crop of bloom.

PÆONIES.—BARR'S HARDY DOUBLE CHINESE. June and July-flowering. Sweet-scented.

DOUBLE CHINESE PÆONY EUGÈNE VERDIER.

These magnificent Pæonies bear large handsome flowers during June, in many beautiful colours, including pure white, blush-rose, pink, bright and deep crimsons, while most of them are deliciously rose-scented. Their ornamental and massive foliage, in addition, renders them attractive plants for the herbaceous border or to intermingle with shrubs. When planted in beds or grouped in the flower border, Lilies (especially L. speciosum and L. auratum) should be associated with them, as they do well together, and succeed each other in time of flowering. flowers are greatly valued for cutting, and the buds open freely in water; the foliage is also useful for cutting during autumn for church and indoor decoration, the leaves assuming beautiful autumnal tints of bronze and crimson.

Culture.—Before planting trench the ground as deeply as possible, adding abundance of rotten mahure, and after planting mulch the surface with manure. Occasional applications of liquid manure during the growing season are beneficial and the plants should remain undisturbed as long as possible. As Pæonies form their flower-buds during spring, plant in a N.W., S.W. or W. aspect, so that the sun's rays do not fall upon them before 11 or 12

o'clock, or the flower buds may be damaged by the early morning sun falling on them while they are in a half-frozen state. This can be obviated by selecting the positions named above.

THE PLANTING season for Paonies is from September to March; those planted in early autumn should produce some bloom the following summer.

BARR'S HARDY SINGLE CHINESE & JAPANESE PÆONIES.

These Single Pæonies are valuable for cutting, having flowers of great beauty ranging in colour from white, blush, pink, and rose to deep crimson. They bloom in early June, and are exceedingly decorative plants for herbaceous borders and to intermingle with shrubs; they are also excellent subjects for woodland walks or drives, 31-4 ft.

The Chinese varieties are true singles with pollen bearing anthers, whereas in the Japanese (marked †) the centre consists of abortive anthers more or less transformed into narrow petaloids.

Culture _ Any ordinary garden soil enriched with manure.

Guiture.—Any ordinary garden son entitled with manners.

MAY-FLOWERING SINGLE PÆONIES.

Hardy Species and Varieties.

These Single Pæony Species, the majority of which are of European origin, contain some of the most beautiful of the genus, and in many cases are now becoming extremely rare, the following collection is, we believe, the most complete now in commerce. Not only are they of great beauty and interest in the garden or herbaceous border but they can readily be established in grass and may be used with considerable effect in shrubberies or drives. They are of easy culture and perfectly hardy and will succeed in any fertile soil (preferably enriched with manure) either in full sun or partial shade and should be disturbed as little as possible.

HAPDY TREE PEONIES (Paonia Moutan).	

HARDY TREE PÆONIES (Pæonia Moutan).

The Tree Pæony is a native of *China* and *Japan* and of extreme antiquity. A well-grown specimen is one of the finest hardy shrubs imaginable and is not of difficult culture. They are perfectly hardy and will succeed in any good rich, well-drained garden soil. They should be planted in a south-west aspect sheltered from cutting winds and early morning sun, in order to avoid injury to the flower buds by late spring frosts. The immense flowers are borne in *May*, and when established the plants will attain a height of 4 to 6 ft. They may also be grown in pots for conservatory decoration, and will bear very gentle forcing.

For Tufted Pansies or Bedding Violas, see page 67.

PAPAVER ORIENTALE (Giant Oriental Poppies). A Select List of the best varieties in cultivation.

For gorgeous colouring, these handsome Giant Oriental Poppies have few rivals amongst hardy plants. During May and early June their noble foliage and large brilliant flowers produce a magnificent effect in shrubbery and herbaceous borders, or wherever large breaks of distinct and glowing colours are required. As isolated subjects in grass, or naturalised in the wild garden, they are very effective. The flowers are greatly valued for vases, and will last long in water if cut

in the early morning when the bud is bursting, and the outer green calyx be stripped off.

We recommend Gypsophila Bristol Fairy, paniculata or paniculata fl. pl., for intergrouping with the Oriental Poppies, as they come into bloom as the poppies are going over, thus maintaining a floral decoration up to September. Plant in autumn or early spring.

BARR'S LARGE-FLOWERED PHLOXES.

Varieties of Phlox decussata (syn. paniculata).

A SELECT LIST OF THE BEST VARIETIES IN CULTIVATION. For Late Summer and Autumn-flowering (July to September).

BARR'S LARGE-FLOWERED PHLOXES.

These grand Perennial Phloxes deserve a prominent place in all hardy flower borders, or where breaks of brilliant colours are required during July, August and September. When cut, their large heads of bloom go a long way in floral decorations. The colours range from pure white to the richest crimson, pale mauve to deep purple and violet, and from soft rose and salmon to bright coral-red, all having a delicate fragrance. They succeed in almost any soil enriched with manure, but are benefited by a mulching of decomposed manure in spring, and in hot weather by occasional soakings of water. In warm districts it is best to plant them in partial shade, the flowers then lasting much longer than when grown in the full sun.

The Perennial Phlox has been greatly improved during the last few years, the result being larger and bolder heads, with individual flowers twice and three times the size of those of the older kinds. The varieties offered below include the finest of the new introductions and only the very best of the older kinds.

HARDY HYBRID WATER LILIES (NYMPHÆAS).

These Hybrid Hardy Water Lilies are of fascinating beauty. Their colours embrace the most vivid crimsons, the softest of pinks and roses, delicate creams, yellows and snowy whites, while some have charming blendings of more than one shade; in many cases their beauty is enhanced by prominent golden stamens, while others are fully double and resemble giant roses.

The introduction of these beautiful Hardy Water Lilies into the Rock or Herbaceous

NYMPHÆA TUBEROSA RICHARDSONII.

garden is strongly recommended, and can be easily arranged for even in small gardens, by sinking wooden tubs into the ground. These should be thoroughly well pitched inside and out to make them water-tight and preserve the wood; tar must not be used, as the gases it throws off are detrimental to plant life. The smaller growing varieties marked * should be used, planted in 6 to 9 inches of good fibrous loam. A series of these sunk tubs along the foot of the rock-garden or in front of the herbaceous border produces a charming effect, especially if the tubs of Nymphæas are alternated with Reeds, Butomus umbellatus (Flowering Rush), Scirpus, Typha, Ranunculus Lingua, and Sagittaria, while Japanese Primulas, etc., may be grouped at the back and between the tubs. Another plan is to make concrete basins with an overflow or outlet at one side, so as to produce a gentle flow when adding fresh water; this should only be given when necessary, as a sudden change of temperature is apt to check growth.

Culture, Method of Planting, etc.

These Hybrid Water Lilies have proved to be hardy, but where they are grown in tubs or small basins it is advisable to give some slight protection during very severe and prolonged frosty weather.

Situation .- Nymphæas should be planted in full sun, and in still water. When grown in artificial basins, etc., it is a mistake to add fresh water frequently as it is apt to chill the plants, as Nymphæas do not flower well until the water has been warmed by the sun. They strongly resent cold water from a spout or fountain jet falling upon the foliage, as this is apt to check growth.

When planted in streams and rivers, basins or creeks, they should be protected from any rush of water which might otherwise tear or damage the leaves or even wash away the plants.

Soil .- Any kind of soil such as is found at the bottom of lakes will suit the NYMPHEA, but where a soil has to be provided, we recommend good fibrous loam with the addition of 1 part in four of welldecayed stable or cow manure and old leaf-soil. A depth of 9 to 12 in. of good soil is sufficient, which should be firmly rammed when planting.

Depth to Plant.—A depth of 1 to 2 ft. of water above the crowns when established is sufficient for most kinds of Water Lilies. The leaves of newly planted Nymphæas must be allowed to float, more water being added as growth proceeds; failures are frequently caused by starting the plants at too great a depth; if the depth of water cannot be controlled the plants should be started in boxes in shallow water and transferred later to their permanent quarters when sufficient leaf growth has been made. For the less rampant growers, such as those marked † and *, 9 to 18 in. of water above the crowns is quite sufficient, while the stronger growers, such as varieties of N. Marliacea, N. alba, etc., are best grown in a depth of 2 to 4 ft. of water above the crowns. We have seen the stronger-growing Nymphæas, when established, flourishing in a depth of 4 to 5 ft. of water.

Distance apart to Plant .- The strong growing varieties should be planted about 6 ft. apart, the medium growers marked † about 4 ft., and the small growing varieties marked * 2 ft. apart.

Method of Planting .- In lakes or ponds over 2 ft. deep, raised mounds or open brick structures should be built up so as to bring the roots within the required depth, or plant in baskets and sink where required. Except when previously planted in baskets, place a sod of good fibrous loam over the roots, leaving only the crown exposed; this will keep them in position until established. NYMPHÆAS (Hardy Hybrid Water Lilies)—continued.

We supply suitable baskets for planting Water Lilies in at 1/6 each, or will plant them in a suitable mixture of loam and manure ready for sinking at an inclusive charge of 3/- each; the plants in such cases, however, must be sent by passenger train to ensure quick transit, and the cost of carriage is frequently so high that customers may find it better to have the Water Lilies by parcel post and the baskets and soil mixture (if required) sent by goods train separately.

Time of Planting.—The best time to plant Nymphæas is from late in April to the end of May. Orders are booked for delivery during this period.

Varieties to Plant.—Care should be taken in selecting suitable sorts for small basins, as some kinds, such as the N. Marliacea varieties, make too strong a growth for this purpose. A study of the marks against the varieties offered will be found of great value in selecting. The varieties of N. odorata and tuberosa are natives of America, and flower best in warm sunny districts.

Confervoid Growth in Tanks and Ponds .- This objectionable slimy green growth, which many people are troubled with in their tanks and ponds during spells of hot dry weather, can be got rid of, without injury to plants or fish, by the introduction of copper sulphate crystals placed in a coarse bag and drawn to and fro across the pond. The quantity should be at the rate of $2\frac{1}{2}$ ozs. to 10,000 gallons of water. To estimate the bulk of water multiply together the average breadth and length and the result by the average depth, all expressed in feet; then multiply this by 6½, the final result being number of gallons. If the first application does not suffice, repeat in a week or ten days.

- * Indicates small growing varieties suitable for tubs or small tanks (see page 70).
- † Indicates varieties of medium size which will flourish in from 12 to 18 in. of water.

Those not marked as above are larger growing varieties which should be planted where there will be 2 ft. of water above their crowns and should be given sufficient room for ample leaf growth.

alba (The Large White Water Lily), the gem of our native aquatics; it may be planted at a greater each. depth than the other varieties if required	
atro-purpurea, flowers intense crimson with golden anthers, foliage a dark purplish shade 12/6	
Attraction, deep garnet-red flowers flaked rose on outer petals, the sepals are flesh-coloured streaked garnet, and the anthers scarlet and gold, very handsome	
† candida, medium-sized pure white flowers and light green foliage, very suitable for tubs or small tanks; native of Bohemia	
colossea, large flesh-coloured sweet-scented flowers; a strong grower for deep water, A.M.R.H.S. 5/6	
† Ellisiana, flowers brilliant rosy-red with bright orange-coloured stamens, A.M. B.H.S	
Escarboucle, handsome flowers of immense size, brilliant vermilion-red with deep vermilion stamens, one of the finest Nymphæas, A.M. R.H.S.	
formosa, large rose-pink flowers with pink sepals and golden anthers, A.M. R.H.S	
† Froebeli, medium sized flowers, beautiful rose-crimson, sweet-scented and of easy culture 7/8	
Gladstoniana, a strong-growing variety producing enormous snowy white flowers with conspicuous golden anthers, early flowering; it should not be cramped for space	
James Brydon, flowers of perfect globular form and large size, colour a beautiful soft rosy red; medium strong grower and very free bloomer, A.M. B.H.S	
† Laydekeri fulgens, rich bright rose-crimson flowers with orange stamens	
Marliacea albida, producing neat ivory-white flowers with golden stamens, a strong grower and profuse bloomer, F.C.C. B.H.S.	
,, carnea, very large vanilla-scented flowers, of a delicate soft flesh shading to white with golden stamens; a strong grower and free bloomer, A.M. R.H.S	
brown foliage; a strong grower and free bloomer, F.C.C. R.H.S	
white, and having yellow stamens; a strong grower and free bloomer, A.M. R.H.S 3/6 Moorei, the finest yellow Water Lily, large soft clear yellow flowers, foliage marbled brown, sturdy	
grower	,
Mrs. Richmond, very large globular flowers, inner petals pretty rose-pink, shading to flesh on outer petals, the foliage being of a distinct and charming pale green; a strong grower, and the best in its colour of the larger growing varieties, A.M. R.H.S	
Newton, large open star-shaped flowers of similar form to a Cactus Dahlia, outer petals flesh-rose, inner petals rosy vermilion with huge golden centre; the whole flower passes with age to rosy	

NYMPHÆAS (Hardy Hybrid Water Lilies)—continued.	each.
† odorata maxima (syn. gigantea), the Rice Field Water Lily of North Carolina, handsome foliage and large pure white cup-shaped flowers with conspicuous golden centre, very fine	5/6
* ,, pumila (syn. minor), small fragrant starry white flowers, a dwarf grower suitable for tubs or shallow tanks	5/6
† Paul Hariot, producing magnificent flowers, creamy yellow shaded soft rose	8/6
* pygmæa alba, small white flowers, a charming miniature Water Lily for tubs, aquariums, etc., will grow in 6 in. of water	7/6
* pygmæa Helvola, bearing miniature sulphur-yellow flowers, leaves daintily marked with bronze, profuse bloomer; one of the smallest Water Lilies and a gem for small aquariums, tubs, and shallow water	8/6
	10/6
† Sioux, large flowers opening a beautiful chrome-yellow and passing to a rich orange suffused copper-red, a unique and pleasing colour	8/6
† Solfatare, flowers rich yellow passing off rose, a free-flowering variety	8/6
Somptuosa, immense star-shaped flowers, flesh pink with rose centre and rich orange stamens tuberosa Richardsonii, having very large double white globe-shaped flowers of exquisite	8/6
form; of vigorous constitution and suitable for large tanks or lakes, rosea (syn. Brakeley), very large fragrant flowers, of a soft rose-pink shade with	5/6
orange stamens; a sturdy grower for lakes or large tanks W. Doogue, a very fine strong growing variety remarkable for the beautiful globular shape and	9/6
substance of its flowers which are very large and of a delicate blush-pink passing to white † W. Falconer, the deepest coloured Nymphæa, having very deep blood-crimson flowers and bronze-coloured foliage, requires 1½ to 2 ft. of water, unique in colour and very fine	edw
HARDY CLIMBERS AND ORNAMENTAL SHRUBS.	ndla
For Training on Walls, Balconies, Arches, Trellis-work, Pillars, Pergolas, Etc.	c.
As a guide to our customers, where necessary, we indicate, after the descriptions, most suitable positions for the various species:— N . = N orth a spect; S . = S outh a spect. E . = E as E	the ect;
	each.
ABUTILON vitifolium, covered in early summer with large open soft blue flowers with a satiny lustre; one of the most beautiful of flowering shrubs, hardy in the South, where it attains a height of 6 to 8 feet; in cold districts it requires a sheltered, warm, sunny position	
AMPELOPSIS (Virginian Creeper), now included under Vitis. See page 75.	
BERBERIS Darwinii, one of the finest of flowering evergreens, covered in early summer with	niol
orange-yellow flowers	1/6
,, stenophylla, producing orange-yellow flowers during summer followed by purple berries, one of the most beautiful plants for making an impassable hedge, according to size 1/6 to	2/6
BIGNONIA. See Tecoma, page 75.	0
BUDDLEIA. Handsome free-flowering shrubs for south walls, and the back of flower borders, shrubberies, etc. The variabilis varieties should be cut back early in spring to within 12 inches of the ground, as they bloom best on the same summer's growth. Aspect S. or W.	mal mal
globosa (Orange-ball Tree), growing to a ht. of 10-12 ft., very decorative in early summer	2/6
variabilis magnifica, having long dense racemes of heliotrope coloured, sweet-scented	OIR
flowers from summer to autumn, foliage grey, very fine, Taplow Variety, long well-formed racemes of bright rose-lilac flowers, fragrant	2/6 2/6
,, Veitchianus, long thin sprays of deliciously scented dark lilac flowers, beautiful	2/6
CASSINIA fulvida (syn. Diplopappus chrysophyllus), the Golden Heath, a golden tinted evergreen shrub for rock gardens or borders, flowers white with Heath-like foliage, valuable for winter effect, 2-3 ft	2/-
CEANOTHUS (Blue Bush), beautiful on south walls, or grown in bush form.	
dentatus, dense clusters of small blue flowers and neat evergreen foliage, S., May-June	3/6
Gloire de Versailles, producing large sprays of light blue flowers, summer to autumn, S., A.M. B.H.S.	3/6
Veitchianus (true), having dark evergreen foliage and dense clusters of pretty bright blue flowers in early summer, S., A.M. R.H.S.	3/6
CHOISYA ternata (Mexican Orange-Flower), covered in early summer with clusters of deliciously fragrant white flowers; a beautiful evergreen wall shrub, S. or W	2/6
CLEMATIS (Climbing Varieties). These beautiful hardy Climbers are indispensable for walls, trellis-work, arches, festoons, or for training on poles, etc., while on rockwork, or rambling over the stumps of old trees, they are very effective. N. or S.	

HARDY CLIMBERS AND ORNAMENTAL SHRUBS, Clematis—continued. CLEMATIS, Jackmanni Section.—The varieties offered in this section produce masses of single flowers of large size from July to October. February is the best month for pruning, and as the varieties in this section flower entirely on the young growths, the old wood should be cut well back to encourage a vigorous growth; the soil may with advantage be mulched with old manure and mortar rubble.	each.
Comtesse de Bouchaud, flowers silvery pink, very free bloomer	3/6
Gipsy Queen, having bright rich velvety purple flowers, handsome	3/6
Jackmanni alba, pure white, very free	3/6
rubra, rich crimson flowers, very handsome and free-flowering	3/6
granted an improvement on the two producing large broad notelled wish	-1
purple flowers, handsome; excellent for North aspects	3/6
Madame Edouard André, a handsome and attractive variety bearing in abundance	
flowers of a velvety rosy claret	3/6
Mrs. Cholmondeley, lavender slightly tipped purple, a great favourite	3/6
CLEMATIS, Lanuginosa Section. — The flowers in this section are large, handsome, and perfectly formed, produced in succession on short lateral shoots during summer and autumn. Pruning should be done during February, and consists in removing any straggling, weak or overcrowded growths.	
Beauty of Worcester, flowers clear blue with	216
white anthers	3/6
La Lorraine, a lovely mauve suffused pink, a distinct and charming colour, strong grower	3/6
Lasurstern, very large deep sky-blue flowers,	3/0
the richest blue in this section, strong grower	3/6
Madame Le Coultre, a very fine large-flowered	9/0
pure white variety	3/6
Mrs. Hope, we offer this as an improvement	0/0
on lanuginosa type, very large flowers of	
a beautiful soft mauve	3/6
Nellie Moser, flowers shell-pink with rose-	
coloured bar running down petals	3/6
W. E. Gladstone, very large flowers of a	
beautiful pale silvery mauve, a nice cool	
colour; of good constitution	3/6
William Kennett, very large deep lavender	0.10
CLEMATIS MRS. CHOLMONDELEY. flowers; of fine constitution	3/6
CLEMATIS, Viticella Section.—The varieties in this section are of vigorous growth, flowering in profusion during summer and autumn. The flowers are of medium size and produced in graceful clusters. For pruning notes see Jackmanni Section.	
Madame Jules Correvon, medium sized flowers of a bright wine-red colour. We offer this	
as an improvement on Kermesina, being a better colour	3/6
Ville de Lyon, flowers vivid crimson, showy, A.M. R.H.S	3/6
CLEMATIS, Small-flowered Section.—The flowers of these range in size from that of a	1000
shilling to a half-crown piece. The varieties of <i>C. montana</i> are rapid, vigorous growers, and smothered in blossom during <i>May</i> and <i>June</i> . These flower on the old ripened wood, which should be trained in, removing all weak and unripened wood.	
flammula (Sweet-scented Virgin's Bower), producing clusters of small pure white flowers,	
deliciously scented, AugSeptdeliciously scented, AugSept	3/6
montana grandiflora, flowers white, the size of a shilling, produced in great profusion	216
during May, S.; a creeper of rapid growth	
rubens, charming rosy pink flowers, foliage shaded purple-bronze with silvery veining; a very free, rapid grower, S., F.C.C. R.H.S	3/6
[1] 사용 [1] 사용 시민 사용 시민 사용 시민 사용 [1] 사용 시민	
vitalba (Traveller's Joy), our wild native Clematis; of rapid growth and valuable for quickly	
covering unsightly objects in the garden	2/6
COTONEASTER horizontalis, a handsome rock and low-wall shrub, with graceful arching	
foliage of a glistening green and bearing scarlet berries in autumn, S. or E., A.M. R.H.S	2/-
microphylla, a very pretty evergreen shrub for walls or rock garden; it has small dark green box-like leaves and during winter is covered with velvety crimson berries, S. or E	
CRATÆGUS Pyracantha Lalandii, Laland's Scarlet-Berried Hawthorn, a handsome	
evergreen, covered from autumn to spring with clusters of showy scarlet berries, S. or E	3/6

HARDY CLIMBERS AND ORNAMENTAL SHRUBS—continued.	each.
CYDONIA japonica (Japanese Quince), charming subjects for walls, or if grown in bush form, for flower borders and large rock-gardens; they are covered from March to May with	
large brilliantly coloured apple blossom-like flowers, followed in autumn by large hand- some fruit. North or South aspect.	
Aurora, a lovely salmon-rose shade, 5 ft	3/6
eburnea, strong growing variety forming a bush 5 to 6 ft. high covered with scarlet flowers	3/6
Maulei, fiery terra-cotta, dwarf grower suitable for rock garden, 3 ft	3/6
rubra grandiflora, flowers scarlet-red, erect strong grower	3/6
DAPHNE Mezereum, a very charming shrub, the leafless branches being covered during	9/0
Jan. and Feb. with red-purple flowers followed in June by cherry-coloured berries	2/6
DIERVILLA (syn. Weigela) Abel Carrière, producing rose-pink flowers, very fine	2/6
,, Eva Rathke, flowers deep crimson, S. or W	2/6
FABIANA imbricata, a lovely evergreen flowering shrub with heath-like foliage and smothered	
during May with small white tubular flowers. It needs a warm position against a rock or wall, and is also a charming cold greenhouse plant, 3 ft	2/6
FORSYTHIA intermedia, bright golden flowers, very showy; a free bloomer of erect habit,	
good for walls or as a border shrub, springaccording to size 1/6 and	2/6
spectabilis, the finest of all, producing large pendent golden flowers in great profusion, spring, A.M. R.H.Saccording to size 1/6 and	2/6
suspensa (Japanese Golden Ball Tree), a lovely hardy deciduous shrub, covered with pendent golden blossoms on wand-like stems, FebMarch, 5-6 ftaccording to size 1/6 and	2/6
vitellina, stems clothed with dainty golden flowers in springaccording to size 1/6 and	2/6
FUCHSIA Riccartoni, flowers bright scarlet; a variety grown largely as hedges and against	110
walls in the south of England	1/6
HEDERA (Ivy). Strong plants in pots.	01
canariensis (Irish Ivy), the common large-leaved Ivy	2/-
,, aurea-maculata, foliage green, blotched more or less pale yellow	2/-
dentata variegata, large gold and green foliage, very handsome	2/6
marginata media, large metallic silvery foliage with narrow silvery margin	2/-
Russelliana, stiff erect grower with green foliage, very distinct; valuable for low walls,	910
pillars, buttresses, or rock-garden	3/6
Willsiana, foliage bronzy brown, large and handsome.	2/-
HELICHRYSUM rosmarinifolium (syn. Ozothamnus) (Snow in Summer), a handsome evergenen covered in late summer with clusters of white flowers; excellent for sunny walls,	918
etc., 2½ ft	2/6
HONEYSUCKLES, see Lonicera.	
IVY, see Hedera.	
JAPONICA, a popular name for Cydonia japonica, see above.	
JASMINUM fruticans, a semi-evergreen shrubby species producing yellow flowers in June, 3 to	010
5 ft.: a good wall shrub	2/6
nudiflorum (The Yellow Winter Jasmine), a favourite old plant, W	2/6
officinale, producing in summer sweetly scented white flowers, S. or W	2/6
,, affine (Large-flowered Sweet-scented White Jasmine), S. or W	2/6
JUNIPERUS Sabina tamariscifolia (The Spanish Savin), grey-green foliage, of prostrate	10/8
habit, fine for the rock garden and to overhang low wallsplants according to size, 2/6 to	
LOGANBERRY, producing luscious fruit, a rapid climber for fences, poles, etc	2/6
LONICERA (Honeysuckle), best adapted for poles, arbours, or trellises; all are sun lovers.	
fragrantissima, an evergreen winter-blooming species, flowers white and very sweet- scented; best treated as a bush	2/6
gigantea superba, producing extra large orange-yellow flowers, handsome	2/6
japonica aureo-reticulata (Japanese Golden Variegated-leaved Honeysuckle), a rapid- growing evergreen climber	2/6
,, brachypoda, flowers sweetly scented, very rapid climber	
,, Halliana, flowers white changing to yellow, sweet-scented; a rapid grower	2/6
Morrowi, flowers cream passing to gold, a vigorous grower, sweet-scented	501-001
nitida, an attractive evergreen shrubby species from China, with small dark glossy green	
leaves; a very fine hedging shrub being of dense bushy habit and of rapid growth. according to size, 1/6 to	3/6
Periclymenum belgica (Early Dutch Honeysuckle), producing sweet-scented yellow	010
flowers shaded rose, from early summer	2/6
,, pallida (Large-flowered Early Cream Woodbine Honeysuckle)	3/6
sempervirens (Scarlet Trumpet Honeysuckle), suitable for warm sunny situations out of doors, or sunny retaining walls: a favourite climber for the cold greenhouse	

Bann & Conce, 11, 12 a 10 and 1	
OLEARIA stellulata the Victorian Snow-bush, a lovely low wall and rock shrub, covered	each. 2/6
in summer with snowy white flowers, S	3/6
Constance Elliott (Sweet-scented White Passion-flower), S. or W	3/6
PHLOMIS fruticosa (Jerusalem Sage), a handsome evergreen shrubby species, with downy grey foliage and bright yellow flowers produced in whorls on erect spikes, July, 3 to 4 ft	1/6
PLUMBAGO capensis, a lovely greenhouse climber, also excellent for summer bedding, producing clusters of pure blue flowers throughout summer	3/6
,, alba, a white companion plant to the above	3/6
POLYGONUM baldschuanicum, a lovely deciduous rapid-growing climber for poles, arbours, trellises, etc., smothered during summer and autumn with pretty pendent sprays of small white flowers tinged pink; suitable for any situation, A.M. R.H.Sper doz. 21/-	2/-
PYRACANTHA, see Cratægus Pyracantha, page 73.	
PYRUS japonica, see Cydonia, page 74.	
RIBES (Flowering Current), early Spring, free-flowering shrubs of easy culture.	
aureum, flowers yellow, pretty green foliage charmingly tinted in autumn	1/6
sanguineum, a showy deciduous shrub producing masses of rose-crimson flowers	1/6
" splendens, an improvement on the above	2/-
ROSES. See below.	100E
RUBUS deliciosus (Rocky Mountain Bramble), a charming shrub forming a spreading bush covered with large snow-white flowers, 2 in. across; the finest of its genus, June, 5 ft	5/6
SOLANUM crispum Glasnevin variety, a beautiful hardy variety producing clusters of beautiful satiny mauve flowers with orange-coloured anthers throughout summer, S	2/6
jasminoides, a beautiful evergreen climber, producing in profusion from August to October sprays of snow-white flowers with prominent golden stamens; hardy in the South and West of England in sheltered situations, also a charming cold greenhouse climber	2/6
SPIRÆA, handsome shrubs for Flower Borders or Woodlands.	210
Anthony Waterer, a handsome shrub with bright crimson flowers during summer, 2 ft	1/6
Menziesii triumphans, producing compact pyramidal plume-like heads of bright rose- crimson flowers, July-Sept., 5 ft.; a good border shrub	2/-
multiflora arguta (French May), one of our most beautiful early-flowering shrubs, covered in spring with sprays of dainty white flowers, 5 ft. Award of Garden Merit, R.H.S.	1/6
TAMARIX (Tamarisk) hispida æstivalis, a graceful shrub with feathery glaucous green foliage, and producing sprays of pretty pink flowers in July; an excellent seaside shrub, also charming in flower borders; to obtain strong growth and good bloom cut back each spring	1/6
TECOMA (syn. Bignonia) radicans, The Ash-leaved Scarlet Trumpet Flower, a charming climber for sunny walls, producing clusters of orange-red flowers during Aug. and Sept., S.	2/6
TROPÆOLUM speciosum (The Flame-flowered Nasturtium), covered during summer with brilliant vermilion-scarlet flowers; it thrives best on the north side of an Arbor-vitæ, Holly, or Yew hedge, N. Pots full of roots, per doz. 12/6	1/3
,, ,,	6d.
VIRGINIA CREEPER. See Vitis inconstans.	
VITIS Brandt, a hardy fruiting vine, with handsome foliage, which assumes the most brilliant shades of rosy scarlet in autumn	3/6
Coionetize (Crimson Glory Vine), producing large soft pea-green foliage, tinted rose,	DELL'S
changing in autumn to scarlet; a rapid grower, excellent for pergolas, arbours, etc	3/6
inconstans (Ampelopsis Veitchii), Self-clinging Small-leaved Virginian Creeper	2/6
vinifera purpurea (Teinturier Grape), producing large rich purple foliage, prized for table decoration	3/6
WEIGELA, see Diervilla (the correct name), page 74.	lqa&*
WISTARIA multijuga (the Giant-flowered Wistaria of the Japanese Tea Gardens), producing	Bha t
very long racemes of large lilac flowers in early summer, S. or W	3/6
,, sinensis (The Common Wistaria), flowers purple-lilac, borne in long drooping racemes in early summer, S. or W.	3/6
ROSES, BEST ENGLISH GROWN PLANTS.	
Standards, named sorts, Teas, Hybrid Teas, and Hybrid Perpetualseach 5/- to	616
